Progonadoliberin II precursor (Chicken-type II gonadotropin-releasing

E rogonadoliberin II precursor (Chicken-type II gonadotropin releasing)

E hormone) (GGNRH:II) [Contains Gonadoliberin II (LH-RH II)

[Luteinizing hormone releasing hormone II] (Gonadotropin releasing)

E hormone II) (GRNRH II) (Luliberin II); GRNRH-associated peptide II].

Soryzias latipes (Medaka fish) (Japanese ricefish).

-!- TISSUE SPECIFICITY: Expressed in the cell bodies of a cluster of neurons in the midbrain tegmentum.
-!- MISCELLANDOUS: Teleost species possess three paralogous GnRHs: mdGnRH and cGnRH-II have been identified in tetrapods; sGnRH has no tetrapod ortholog and is thought to be a duplication of cGnRH-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AMIDATION (G-32 PROVIDE AMIDE GROUP) (BY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             EMBL; AB041334; BAB16300.1; -.

Proc. Natl. Acad. Sci. U. S.A. 91:1423-1427 (1994).

-! FUNCTION: Stimulates the secretion of gonadotropins.

-!, SUBCELLULAR LOCATION: Secreted.

-! TISSUE SPECTIFICITY: EXPRESSED IN ONLY ONE CELL GROUP IN THE MESENCEPHALON.

-!- SIMILARITY: Belongs to the GRRH family.

Biochem. Biophys. Res. Commun. 187:127-134(1992).
-i- FUNCTION: Stimulates the secretion of gonadotropins.
-i- SUBCELLUIAR LOCATION: Secreted.
-i- SIMILARITY: Belongs to the GRRH family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AC1778CE75C1C313 CRC64;

Endocrinol. 5:931-937(1991).
-!- FUNCTION: Stimulates the secretion of gonadotropins.
-!- SUBCELLUAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: EXPRESSED ONLY IN THE TERMINAL NERVE NUCLEUS
-!- SIMILARITY: Belongs to the GnRH family.
-!- SIMILARITY: Belongs to the GnRH family.

-!- MISCELLANEOUS: Teleost species possess three paralogous GnRHs:
mdGnRH and cGnRH-II have been identified in tetrapods; sGnRH has
no tetrapod ortholog and is thought to be a duplication of cGnRH-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               EMBL; AB041335; BAB16302.1; -.

"Primary structure and function of three gonadotropin-releasing hormones, including a novel form, from an ancient teleost, herring."; Endocrinology 141:505-512(2000).
-!- FUNCTION: Stimulates the secretion of gonadotropins.
-!- SUBCELLUIAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the GnRH family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 01-FEB-1994 (Rel. 28, Created)

FUNCTION: Binds cooperatively single-stranded DNA in a sequence-independent manner. Involved in DNA-replication, regulation of mRNA formation, and host-range specificity. Zinc is required for DNA binding (By similarity).

SUBCELLULAR LOCATION: NUCLEAR. ACCUMULATES IN INFECTED CELLS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
